

**Directions:**

You have \$50.00 available to spend to complete all of your errands. Estimate the cost of each item and add these together for the total. Were you under or over your budget of \$50.00? If you were under, what amount of money would you have left to spend? If you were over the \$50.00 amount, by how much were you over?

**ERRAND LIST**

Pick up anniversary card for a friend and wrapping paper for the gift; buy razors and shaving cream; buy a gallon of milk and 4 stamps on your way home.

**If the exercise above feels too challenging, try this modification:**

You have several errands to run. Estimate the cost associated with completing each errand. You can write down each estimate and add them together on a separate piece of paper, or you can total them using mental math. Determine the total money spent to complete your errands.
